

# Measuring an Endless Belt

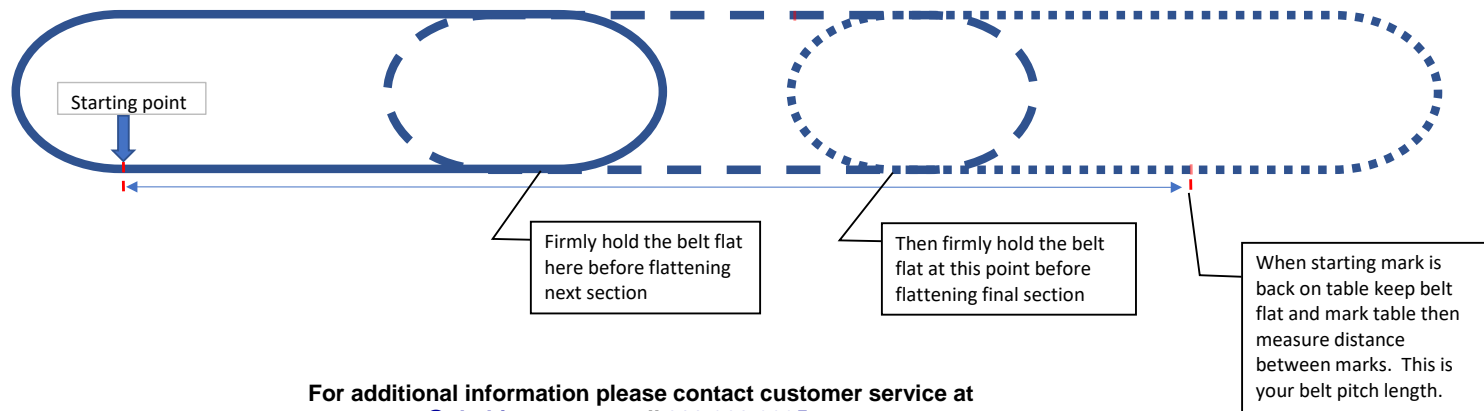

1. Mark the belt and the table with your starting point.
2. Hold the belt at this starting mark and lay it out pressing it down flat as far as you can before you get to the looped end then hold that section down firmly.
3. Release the starting mark and again press the belt down flat holding that second point down securely flattening the belt out till once again you are toward the end of that span and then once more secure the belt down flat at this third point.
4. Repeat this once more and then flatten the belt out past the original starting mark and mark the table to align with that original starting mark on the belt.
5. Measure this distance. This will be your "Pitch Length".

**NOTE: Do not "walk" the belt or roll it down the table. The belt must be flat in each section when secured.**

**For extremely long belts step 3 can be repeated as many times as needed.**

**Also where space is constrained the first span can be measured once and added for each time the belt is laid out over this length and then added to the final measurement made.**
